SUMMARY

Full-stack software engineer with 5+ years building software: SPAs in TypeScript (React, Next.js, Angular), REST APIs in Node.js and Java/Spring Boot, and data models in PostgreSQL and Oracle. I also spent 18 months in access governance (RBAC, segregation of duties, SOX), so I build features with access control, auditability and tests in mind. I use Claude Code daily, working from repository context files and ADRs, with one reviewed pull request per task.

TECHNICAL SKILLS

Languages:	TypeScript, JavaScript (ES6+), SQL, PL/SQL, PL/pgSQL, Java, ADVPL, PHP
Front end:	React 19, Next.js (App Router), Angular, PO UI, Tailwind CSS, shadcn/ui, Radix UI
Back end & APIs:	Node.js, REST APIs, Supabase Edge Functions, Spring Boot, OAuth2/OIDC (Keycloak)
Databases:	PostgreSQL (row-level security), Oracle, Supabase, Drizzle ORM, Flyway
Testing & CI/CD:	Unit and integration tests (Vitest, Jest, JUnit), code review, CI/CD with GitHub Actions, Docker, Vercel
AI-assisted dev:	Claude Code (daily), context files (AGENTS.md, CONTEXT.md), ADRs
Domain:	TOTVS RM, TOTVS Protheus, IAM, RBAC, SoD, SOX, ITGC, LGPD

PROFESSIONAL EXPERIENCE

Software Engineer · PVT Software · *Remote* **Jun 2024 – Present**

TOTVS-certified partner delivering ERP customization, software engineering and automation.

- Designed and built **SOD Analyzer** on my own: a full-stack segregation-of-duties app for TOTVS RM. Analysts run SoD analyses and send them to a separate approver portal, with audit log and PDF/XLSX exports.
- Built its authentication, row-level security, approval workflow and exports on Supabase; Next.js, React 19, TypeScript, shadcn/ui.
- Proposed **Argos**, a SoD platform that applies approved access changes to TOTVS RM with a full SOX audit trail, and built it with a small team up to a client proof of concept.
- Built Argos's PostgreSQL data layer (migrations, PL/pgSQL, row-level security), Node.js/TypeScript service and Supabase Edge Functions. Every ERP write is read back; unconfirmed changes go to manual review instead of being retried.
- Develop TOTVS RM customizations and SQL/PL-SQL programs on Oracle; reports, integrations and scheduled jobs that cut manual work by more than 6 hours a day.
- Built IT risk matrices and tested IT general controls for clients' annual SOX certification, including remediation plans.

Software Engineer · Corpo de Bombeiros Militar do Espírito Santo (CBMES) · *Vitória, ES, Brazil* **Mar 2026 – Present**

- Lead developer of **ISEO** (Java 25/Spring Boot, Angular 20), the system that runs the corporation's paid supplementary shifts end to end. It models the organization itself: units and duty posts, team compositions by role, ranks and seniority synced from the personnel registry, and each firefighter's qualifications and eligibility.
- Monthly planning in one place: fixed and one-off shifts, batch call-ups, voluntary sign-ups with a fairness-ordered draw, compulsory assignment, swaps, monthly limits and notifications. Rule overrides require explicit permissions and are audit-logged.
- Co-develop the central auth BFF for CBMES apps (OAuth2/OIDC with Keycloak, sessions shared through Redis). 26 Flyway migrations, JUnit and Angular tests, ADRs, Docker deploys via GitHub Actions.

Systems Analyst · Grupo Coroa · *Espírito Santo, Brazil* **May 2023 – May 2024**

- Built TOTVS Protheus routines in ADVPL, REST APIs for PO UI (Angular) screens and ERP integrations; redesigned the landing page in Next.js.

Systems Analyst, IAM & GRC · Vennx · *Remote* **Dec 2021 – May 2023**

- Designed and implemented role-based access control (RBAC) models for TOTVS RM, Active Directory, Microsoft Admin, Hyperion and other client systems.
- Ran segregation-of-duties reviews across 10,000+ users, bringing critical conflicts to zero; automated analysis with SQL.
- Supported SOX through access reviews and ITGC testing; adapted access governance to LGPD/GDPR.

Front-End Developer · Freelance · *Remote* **Mar 2020 – Nov 2021**

- Built React front ends for freelance clients.

Web Designer · Netsimples · *Vila Velha, ES, Brazil* **Jan 2019 – Feb 2020**

- Built client websites from requirements to launch: WordPress/PHP themes and React, JavaScript and CSS front ends.

PROJECTS

- **SoD Profile Validator** · sod-theta.vercel.app · Matches TOTVS RM permission profiles to a governance catalog with exact and fuzzy (Levenshtein) matching. Next.js, TypeScript, Drizzle ORM, PostgreSQL, Vitest.
- **Squadra** · squadra-eight.vercel.app · Multi-tenant app for player cards and balanced team draws; each account's data is isolated with Supabase Auth and PostgreSQL row-level security. Next.js 16, React 19, TypeScript, Vitest.

EDUCATION

Technologist Degree in Systems Analysis and Development · Multivix (3-year undergraduate program) **2022 – 2024**

Certification: curso.dev, full-stack Node.js/Next.js (2025) · Languages: Portuguese (native), English (B2+, near C1)
