

NILO VENTURIN NETO

Software Engineer · Backend · SQL · Node.js · TypeScript

Vitória, Espírito Santo, Brazil (Remote) · +55 27 99923-2154 · venturin.nilo@gmail.com · linkedin.com/in/niloventurin · github.com/dev-nilo

SUMMARY

Software engineer with 3+ years building business systems on relational databases: PostgreSQL (PL/pgSQL, row-level security, migrations) and Oracle (SQL, PL/SQL) for TOTVS ERPs, with Node.js/TypeScript services, REST and SOAP integrations, and React front ends. Conceived and co-built Argos, PVT's segregation-of-duties platform, which reads and writes access profiles in TOTVS RM with replay-safe writes, per-operation failure isolation and a full audit trail. Background in access governance and SOX controls; I document every change and use Claude Code daily.

TECHNICAL SKILLS

Databases & SQL	PostgreSQL (PL/pgSQL functions, row-level security, migrations), Oracle (SQL, PL/SQL), MySQL, Redis, SQLite · Supabase, Drizzle ORM, Flyway
Backend & APIs	Node.js, TypeScript, JavaScript, REST and SOAP APIs, Supabase Edge Functions, Java 21/Spring Boot, ADVPL, PHP, OAuth2/OIDC (Keycloak)
Frontend	React 19, Next.js (App Router), Angular, Tailwind CSS, shadcn/ui, Radix UI, PO UI, Vite
Testing & DevOps	Vitest, Jest, JUnit · Git, GitHub Actions, Docker/Docker Compose, Nginx, Vercel, AWS (EC2, S3)
Domain	TOTVS RM, TOTVS Protheus · IAM, SoD, ITGC, SOX, LGPD

PROFESSIONAL EXPERIENCE

PVT Software

Software Engineer · TOTVS-certified partner, ERP and software engineering

Jun 2024 – Present

Remote

- **Conceived and co-built Argos (SOD Analyzer)**, PVT's segregation-of-duties platform for TOTVS RM, with a small engineering team, from the initial idea to a client proof of concept. Analysts design access profiles, run SoD/SAT risk analyses, route them to Product Owner approval and apply approved changes to the ERP, with a full audit trail for SOX.
- **PostgreSQL data layer**: schema migrations, PL/pgSQL functions and row-level security policies for risks, analyses, approvals and evidence; risk-matrix import with preview and validation (335 rules loaded).
- **ERP integration**: a C# service reads RM modules, profiles and permissions; SOAP writes follow a read → save → re-read pattern to confirm every change. Writes are replay-guarded; unconfirmed operations go to manual review, never automatic retry.
- **Batch maintenance** of up to 50 profiles per ticket (grants and revocations): one analysis per profile, failures isolated per operation, and safe resume from persisted results.
- Node.js/TypeScript service for notifications and admin, Supabase Edge Functions for the SoD engine, React 19 front end, Docker Compose environments for dev, staging and production.
- Develop TOTVS RM customizations and SQL/PL-SQL programs on Oracle, from requirements to production rollout. Built reports, integrations and scheduled jobs that cut manual work by more than 6 hours a day.
- Built IT risk matrices, tested IT general controls and designed remediation plans for clients' annual SOX certification.

Grupo Coroa

Systems Analyst

May 2023 – May 2024

Espírito Santo, Brazil

- Developed TOTVS Protheus routines in ADVPL, REST APIs for PO UI (Angular) screens, and ERP integrations and customizations; redesigned the company's landing page with Next.js.

Vennx

Systems Analyst · IAM & GRC consulting

Dec 2021 – May 2023

Remote

- Designed and implemented role-based access control (RBAC) models for TOTVS RM, Active Directory, Microsoft Admin, Elaw, Hyperion, Gesplan and other client systems.
- Ran segregation-of-duties reviews across more than 10,000 users, bringing critical conflicts down to zero; automated access analysis and reporting with SQL, and supported SOX audits with access reviews and ITGC evidence.

PROJECTS

- **SoD Profile Validator** sod-theta.vercel.app · Matches ERP permission profiles to a governance catalog with exact, normalized and fuzzy (Levenshtein) matching. Next.js, Drizzle, PostgreSQL, Vitest.
- **Squadra** squadra-eight.vercel.app · Multi-tenant team-draw app; each account's data isolated with PostgreSQL row-level security. Next.js 16, Supabase, Vitest.

EDUCATION

Bachelor's degree in Computer Systems Analysis, Multivix

Certification: curso.dev (full-stack Node.js/Next.js) · Languages: Portuguese (native), English (intermediate)

2022 – 2024
